

Internet Express for Tru64 UNIX

Read This First

November 2002

Product Version: Internet Express Version 6.0 for Tru64 UNIX

Operating System and Version: HP Tru64 UNIX Version 5.0A or higher

This document describes new and changed features of Internet Express for HP Tru64 UNIX Version 6.0. Read this document before installing or using Version 6.0 of the product.

Internet Express Version 6.0

The Internet Express for Tru64 UNIX product is included with, and provides Internet capability for, HP Tru64 UNIX AlphaServer systems. It is a suite of popular Internet and administration software that includes security products, mail servers, news and chat servers, an LDAP directory server, a choice of Web servers, and a variety of tools for providing dynamic Web content. The Internet Express product, order number QB-3NCAA-SA (worldwide), includes:

- The product license
- A set of Internet Express CD-ROMs that includes the Internet Express Administration software, the Secure Web Server, Internet Monitor, other Internet server software, and documentation, including HTML, PDF, and PostScript versions of the documentation.

1.1 New Features

Internet Express Version 6.0 contains these new features:

- Choice of Web Servers

In this release, there is a choice of three Web servers:

- Secure Web Server 1.3 (powered by Apache 1.3)
- Secure Web Server 2.0 (powered by Apache 2.0)
- Tomcat Java Servlet and JavaServer Pages (JSP) Engine

Beginning with Internet Express Version 6.0, the installation procedure allows you to choose to install either one version or both versions of the Secure Web Server.

Each of these Web Servers offers different advantages for delivering your Web content. More information on the advantages and disadvantages of each server can be found in the *Secure Web Server Administration Guide*. Choose the best server for your needs or install all on different ports and evaluate them.

- Secure Web Server 2.0 (powered by Apache 2.0)

Internet Express Version 6.0 introduces Secure Web Server 2.0 (powered by Apache 2.0). This Web server is based on the latest offering from the Apache Software Foundation and provides a significant change to the Apache architecture, providing for a combined multithreaded and multiprocess hybrid design for improved performance and throughput.

The Secure Web Server 2.0 offers the latest Web server technology and includes support for IPv6. For more information on this server, see the *Secure Web Server Administration Guide*.

- Tomcat Java Servlet and JavaServer Pages (JSP) Engine

Internet Express Version 6.0 introduces the option for Tomcat as a standalone Web server. Previous releases provided for Tomcat to service requests forwarded only by the Secure Web server. Tomcat has evolved into a robust, full-featured Web Server that is ideal for Web sites that use primarily Java based dynamic content.

For more information on this server, see the *Secure Web Server Administration Guide*.

- PostgreSQL Administration
The PostgreSQL Database Management System can be managed by the Internet Express Administration utility. This option is located on the Administration utility under PostgreSQL Database Management System.
- LDAP Browser
A new tool for graphically browsing, searching, and modifying LDAP directories has been added to the OpenLDAP subset. The LDAP Browser can be accessed from the Administration utility's Manage Components menu and can run on any platform that has Java Runtime Engine (JRE) Version 1.3.1 or higher installed. It provides advanced features like client-side schema checking, support for SSL connections to the server, and the ability to create and manage custom entry templates that streamline the process of adding new entries to the LDAP directory.

1.2 Updated Open Source Software

The following Open Source software has been updated for this release:

- Apache Version 1.3.27 and Version 2.0.42
- Apache Simple Object Access Protocol (SOAP) Service Version 2.3.1
- Apache/Jakarta Tomcat Version 4.0.5
- Dante SOCKS Server Version 1.1.13
- Darwin Streaming Server (DSS) Version 4.1
- Horde Web-based IMAP framework Version 2.1
- IMP Version 3.1 Web-based mail client
- InterNetNews Version 2.3.3
- OpenSLP Version 1.0.9a
- PHP Hypertext Preprocessor for Apache Version 4.2.2
- PostgreSQL Version 7.2.3
- Calamaris Squid log file analysis tool Version 2.50
- Samba File and Print Server Version 2.2.5
- sendmail Version 8.12.6
- Squid Proxy/Caching Server Version 2.4.STABLE7
- Turba Addressbook/Contact Manager Version 1.1
- University of Washington IMAP4 Mail Server Version 2002.328-IX

1.3 New Documentation

A new Best Practice document entitled *Creating Multiple Indexes and Search Pages Using Ht://Dig* is available for Version 6.0. It is accessible from *Internet Express Best Practices*.

1.4 Evaluation Software

The following evaluation software is included on the Internet Express CD-ROM labeled Sources and Evaluation Software:

- RAD-Series AAA RADIUS Server
In addition to the Interlink Networks Basic AAA RADIUS Server included on the kit, the Internet Express CD-ROM includes fully featured RAD-Series AAA RADIUS Server evaluation software from Interlink Networks, Inc. For

instructions on how to install this evaluation software, see the `read_1st.txt` file in the `InterlinkNetworks/` directory.

- **Stryon iAsp**

Stryon Instant ASP (iASP) provides a portable active server framework that lets developers deploy Active Server Pages (ASP) on a Java-enabled Web server such as the Secure Web Server.

A Developer's Edition of Stryon iASP is provided with Internet Express. For instructions on how to install this evaluation software, see the `README.txt` file in the `iasp/` directory.

More information on the iASP product can be found at the Stryon Web site:

`http://www.stryon.com`

- **Tripwire for Servers**

Tripwire for Servers software establishes the foundation for data security by assuring the integrity of data across your network. It is the most widely deployed and trusted data integrity assurance solution for today's most popular platforms. The software establishes a baseline of data in its desired state, detects and reports changes to the baseline, and enables rapid discovery and remediation when an undesired change occurs. Tripwire for Servers detects change, whether accidental or malicious, from outside or within.

For instructions on how to install this evaluation software, see the `README.txt` file in the `tripwire/` directory of the Internet Express CD-ROM.

- **IPv6 Sniff Tool**

The IPv6 Sniff tool aids Tru64 UNIX users in porting applications to use IPv6 (Internet Protocol Version 6). For more information, see the `README.txt` file in the `ipv6sniff/` directory.

- **CommuniGate Pro**

The CommuniGate Pro messaging server can be integrated with complementary solutions such as desktop e-mail software, antivirus products, and billing systems. CommuniGate Pro features antispam protection, antivirus plug-in, Web administration, multidomain support, dial-up capabilities, IMAP multimapbox features, IMAP4rev1, ESMTP, POP3, WebEmail, MailList, LDAP, ACAP, SSL, CLI, SASL, SNMP, and Personal Web Pages with automated publishing.

For more information, see the `README.txt` file in the `CommuniGatePro/` directory.

More information on CommuniGate Pro can be found at the following Web site:

`http://www.stalker.com/CommuniGatePro/`

- **Mozilla 1.1 Web Client for Tru64 UNIX**

The Mozilla Web Client is the next generation Web, mail, and news client, successor to the popular Netscape Communicator Web client. Mozilla is an Open Source Web client, designed for standards compliance, performance, and portability.

The Mozilla 1.1 Web Client also includes many new innovative features for search, privacy, and content management of your Internet information. Built upon the Netscape Gecko browser engine, the Navigator component is now comprehensive, modular, and fully standards compliant — supporting DOM, RDF, XML, CSS, and HTML 4 document formats.

For more information, see the `README.txt` file in the `Mozilla_Browser/` directory.

- **Netscape Version 6.2.3 Web Client for Tru64 UNIX**

The Netscape Version 6.2.3 Web Client is the next generation Web, mail, and news client, successor to the popular Netscape Communicator Web client. Netscape Version 6.2.3 is the commercial version of the Open Source, Mozilla 0.9.4 Web client.

For more information, see the `README.txt` file in the `Netscape6_Browser/` directory.

1.5 Software No Longer Included

In Versions 5.6 and later of Internet Express, the Tcl, TclTk, TclX, expect, and `tcl_cgi` components are no longer included. However, installations of these components from previous versions of Open Source Internet Solutions are not affected by the installation of Internet Express Version 6.0.

Source code for these components is also still available in the `source-tar` directory on the Internet Express CD-ROM labeled *Sources and Evaluation Software*.

If you would like to download and build these components yourself, they are available on the Internet as follows:

Component	URL
Tcl/Tk	http://dev.scriptics.com/software/tcltk/
TclX	http://www.NeoSoft.com/tclx/
<code>tcl_cgi</code>	ftp://ftp.digital.com/pub/DEC/IAS/tcl_cgi-1.6x.tar.Z
expect	http://expect.nist.gov/

1.6 Source tar File Collection for Internet Express Version 6.0

The `source-tar` directory contains the source code for Open Source components installed by Internet Express Version 6.0.

Table 1-1 lists the `tar` source files for the Internet Express Version 6.0 components.

Table 1-1: Open Source Software Source Files for Internet Components

Component	Name of tar File
analog Version 5.23	<code>analog5.23.tar.Z</code>
Apache Version 1.3.27 (includes <code>auth_ldap</code> , <code>mod_fastcgi</code> , <code>mod_frontpage</code> , <code>mod_ssl</code> , and <code>open_ssl</code>)	<code>apache_1.3.27.tar.Z</code>
Apache Version 2.0.42	<code>apache_2.0.42.tar.Z</code>
Apache/Jakarta Tomcat Version 4.0.5	<code>jakarta-tomcat-4.0.5.tar.gz</code>
Apache Simple Object Access Protocol (SOAP) Service Version 2.3.1	<ul style="list-style-type: none"> • <code>soap-bin-2.3.1.tar.gz</code> • <code>soap-src-2.3.1.tar.gz</code>
Batik Java-based toolkit for Scalable Vector Graphics Version 1.5beta	<code>batik-src-1.5beta1.zip</code>
Bean Scripting Framework (BSF) Version 2.2	<ul style="list-style-type: none"> • <code>bsf-bin-2.2.tar.gz</code> • <code>bsf-src-2.2.tar.gz</code>
BIND Version 9.2.0	<code>bind9.2.0.tar.Z</code>
Calamaris Squid log file analysis tool Version 2.50	<code>calamaris-2.50.tar.Z</code>
Cyrus IMAP Version 1.6.24	<code>cyrus-imapd-v1.6.24.tar.Z</code>
Cyrus SASL Library Version 1.5.27	<code>cyrus-sasl-v1.5.27.tar.Z</code>

Table 1–1: Open Source Software Source Files for Internet Components (cont.)

Component	Name of tar File
Cocoon Web Publishing Framework Version 2.0.2	<ul style="list-style-type: none">• cocoon-2.0.2-bin.tar.gz• Cocoon-2.0.2-src.tar.gz
Dante SOCKS Server Version 1.1.13	dante-1.1.13.tar.Z
Darwin Streaming Service (DSS) Version 4.1	StreamingServer-4.1.tar.Z
expect Version 5.32.1	expect-5.32.1.tar.Z
FOP Print Formatter Version 0.20.3	<ul style="list-style-type: none">• fop-0.20.3-bin.tar.gz• fop-0.20.3-src.tar.gz
FrontPage 2000 Server Extensions Resource Kit Version 5.0	FrontPageServerExtensions2000v5.0.tar.Z
Horde Web-based IMAP framework Version 2.1, IMP Web-based IMAP client Version 3.1, and Turba Addressbook/Contact Manager Version 1.1	horde-imp-3.1.tar.Z
ht://Dig Web Index and Search System Version 3.2.0b3	htdig-3.2.0b3.tar.Z
Internet Relay Chat Version 2.10.3p1	irc2.10.3p1.tar.Z
InterNetNews Version 2.3.3	inn-2.3.3.tar.Z
JavaBeans Activation Framework (JAF) Version 1.0.1	jaf1_0_1.zip
LIBPCAP Packet Capture Library Version 0.4	libpcap-0.4.tar.Z
Lynx Browser Version 2.8.4	lynx-2.8.4.tar.Z
Majordomo Mailing List Server Version 1.94.5	majordomo-1.94.5.tar.Z
OpenLDAP Version 2.0.23	openldap-2.0.23.tar.Z
OpenSLP Version 1.0.9a	openslp-1.0.9a.tar.Z
Perl Version 5.6.1	perl-5.6.1.tar.Z
PHP Hypertext Preprocessor for Apache Version 4.2.2	php-4.2.2.tar.Z
PJA (Pure Java AWT Toolkit) Version 2.4	pja_2.4.zip
Pine and Pico Version 4.44	pine_pico-4.44.tar.Z
poppassd Password Changing Server	poppassd.tar.Z
PostgreSQL Relational Database Management System Version 7.2.3	postgresql-7.2.3.tar.Z
Procmail Mail Filtering Language Version 3.22	procmail-3.22.tar.Z
Enhanced Qualcomm POP Server Version 4.04	pop-4.0.4.tar.Z
Rhino JavaScript for Java Version 1.5R3	rhino15R3.zip
RID Version 1.12	rid-1.12.tar.Z
Samba File and Print Server Version 2.2.5	samba-2.2.5.tar.Z
sendmail Version 8.12.6	sendmail.8.12.6.tar.Z
Squid Proxy/Caching Server Version 2.4.STABLE7	squid-2.4.STABLE7.tar.Z
Tcl Version 8.3.1	tcl-8.3.1.tar.Z
Tcl_cgi Version 1.6x	tcl_cgi-1.6x.tar.Z
TclTk Version 8.3.1	tcltk-8.3.1.tar.Z

Table 1–1: Open Source Software Source Files for Internet Components (cont.)

Component	Name of tar File
TclX Version 8.2	tclx-8.2.0.tar.Z
TCP Wrapper Version 7.6	tcpwrapper_7.6.tar.Z
TIN News Reader Version 1.4.5	tin-1.4.5.tar.Z
UDDI Client Libraries in Java (UDDI4J) Version 1.0.3	<ul style="list-style-type: none">• uddi4j-bin-1_0_3.zip• uddi4j-src-1_0_3.zip
University of Washington IMAP4 Mail Server Version 2002.328-IX	imap-2002.328.tar.Z
Washington University File Transfer Protocol (wu-ftp) Server Version 2.6.2	wu-ftp-2.6.2.tar.Z
Xalan Stylesheet Processor for C++ Version 1.3	Xalan-C_1_3-src.tar.gz
Xalan XSLT Stylesheet Processor for Java Version 2.3.1	<ul style="list-style-type: none">• xalan-j_2_3_1-bin.tar.gz• xalan-j_2_3_1-src.tar.gz
Xerces XML parser for C++ Version 1.6.0	xerces-c-src1_6_0.tar.gz
Xerces XML parser for Java Version 2.0.0	<ul style="list-style-type: none">• Xerces-J-bin.2.0.0.tar.gz• Xerces-J-src.2.0.0.tar.gz

The tar file `satan-1.1.4exp.tar.gz` contains prebuilt binaries for the Security Tool for Analyzing Networks (SATAN) Version 1.1.4.

1.7 Register Your Installation of Internet Express

Register your installation of Internet Express with HP to receive information on future releases and to provide input on Internet Express features. Complete the online registration form at the end of the installation procedure or at any time using the Administration utility.

1.8 Software Product Services

You can purchase a support contract that will allow you to receive regular updates to the Internet Express administration software and the Open Source software packaged with the kit. See the *QuickSpecs* for kit order numbers. For more information about support contracts, contact your HP service representative.

1.9 Server Tuning Information on the Web

HP provides application notes on various aspects of administering an Internet AlphaServer and on how to tune your Tru64 UNIX system to improve the performance of your Web server and news server at the following URL:

<http://www.tru64unix.compaq.com/technical.html>

1.10 Installation Requirements

Internet Express for Tru64 UNIX must be installed on a system running the Tru64 UNIX operating system Version 5.0A or higher. See the *Installation Guide* for disk space and memory requirements.

1.10.1 Licenses for Proprietary Software

The Internet Express Administration utility, Internet Monitor, FireScreen, and LDAP Authentication Module for System Authentication are proprietary to, and embody the confidential technology of, Compaq Computer Corporation, a subsidiary of Hewlett-Packard Company. Use of this software is authorized only pursuant to a valid written license from Hewlett-Packard Company or an authorized distributor. See the *QuickSpecs* for details.

1.10.2 Default Port Access

The *Installation Guide* explains how the installation process secures the system by initially restricting access to the Secure Web Server Administration utility and Internet Express Administration utility on port 8081. Access to this port is initially restricted to one local system only. See the *Administration Guide* for information on configuring access control.

1.11 Administration Utility Web Browser Requirement

You access the administration servers from a graphical Web browser. For Internet Express Version 6.0, use Netscape Communicator Version 4.5 or later, or Microsoft Internet Explorer Version 4.0 or later.

The Lynx browser is not supported as a means to access the Administration utility.

Documentation Notes

The Internet Express documentation consists of HTML, PDF, and PostScript versions of the following documents:

- *Read This First* (this document)
- *Release Notes*
- *Installation Guide*
- *Administration Guide*
- *Secure Web Server Administration Guide*
- *Internet Monitor Administrator's Guide*
- *Internet Services User's Guide*
- *Master Index*
- *QuickSpecs*
- *Software Description and Licensing Terms*
- *Best Practices* — These documents provide you with recommended methods for performing specific tasks, rather than presenting all options.

Additional Best Practices are available at the Tru64 UNIX publications Web site:

http://www.tru64unix.compaq.com/docs/best_practices/

- *Reference Pages*

The following sections provide instructions for reading various components of the Internet Express documentation set.

- Reading the documentation (Section 2.1)
- Reading the *Internet Services User's Guide* (Section 2.1.5)

2.1 Reading the Documentation

This section describes the different methods for accessing the Internet Express documentation.

The documentation is available in the following formats:

- HTML
- PostScript
- Portable Document Format (PDF)

2.1.1 Reading Documentation Using the Administration Utility

After installation of the Secure Web Server subset (IAEAPCH), the Internet Express Documentation subset (IAEDOC), and the Internet Express Administration utility (IAEADM subset), you need access to the Administration utility for Internet Express (as described in the *Administration Guide*), so that you can read the documentation following the link from the Web page at:

<http://hostname.domain:8081>

where *hostname.domain* is the host name and domain of the system running Internet Express.

2.1.2 Reading Documentation Using the Public Web Server

You can also read the documentation without the Administration utility by using the public Web server (if you chose to configure one) to access the documentation index page at `http://hostname.domain/documents/bookshelf.html`. If this URL does not work, verify that the Web server configuration file, `/usr/internet/httpd/admin/conf/httpd.conf`, contains the following line:

```
Alias /documents/ "/usr/internet/docs/IASS/"
```

The Internet Express documentation files are installed in the `/usr/internet/docs/IASS` directory.

- You can access the Documentation Bookshelf installed on your system by entering the following URL (substituting the name of your system for *hostname*) in your browser:

```
http://hostname/documents/bookshelf.html
```

- You can also read the installed documentation directly from the file system using a Web browser running on the same system by using the file URL:

```
file:/usr/internet/docs/IASS/bookshelf.html
```

2.1.3 Reading Documentation from the Internet Express CD-ROM

You can also access the Documentation Bookshelf on the Internet Express Installation and Documentation CD-ROM from your Tru64 UNIX System or a PC.

2.1.3.1 On a Tru64 UNIX System

To read the documentation from the Internet Express Installation and Documentation CD-ROM on an AlphaServer system:

1. Log in to your system as root.
2. Insert and mount the CD-ROM, replacing *drive* with the name of your CD-ROM drive:

```
# mount /dev/drive /mnt
```

Usually this will be:

```
# mount /dev/disk/cdrom0c /mnt
```

3. In a Web browser, open the Documentation Bookshelf file by entering the following URL:

```
file:/mnt/index.htm
```

4. Click on the book you want to open.

2.1.3.2 On a PC

To read the documentation from the Internet Express Installation and Documentation CD-ROM on a PC:

1. Insert the CD-ROM into your PC's CD-ROM drive.

The Bookshelf page is automatically displayed in your browser.

If the Bookshelf does not appear, open the following URL, replacing *drive* with the letter of your CD-ROM drive:

```
file:drive:\index.htm
```

2. Click on the book you want to open.

Reading Reference Pages for Internet Express Components

Reference pages for Internet Express components are available in HTML format from the *Internet Express Reference Pages* index page. These HTML reference pages can be viewed using a Web browser.

Alternatively, you can view these reference pages from a command line in a terminal window, if you modify the search path for the `man(1)` command.

The `man(1)` command's search path needs to include the following directories for Internet Express component reference pages:

```
/usr/share/man
/usr/local/man
/usr/internet/pgsql/man
/usr/internet/openldap/man
/usr/news/man
/usr/local/samba/man
/usr/internet/httpd/man
/usr/opt/hpapache2/man
```

You can specify an alternative search path when entering the `man` command by using the `M` or `P` option; for example:

```
# man -M /usr/news/man active.5
```

You can also define the `man` command's `MANPATH` environment variable on the command line or in a file, such as your `.profile` file or `.login` file.

For example, suppose your `MANPATH` environment variable was defined to be the following:

```
/usr/share/man:/usr/dt/share/man:/usr/local/man
```

If you are using the `sh` or `ksh` shell, you could modify the `MANPATH` to add to the search path by adding the following:

```
# set MANPATH $MANPATH:/usr/internet/pgsql/man:/usr/internet/openldap/man:/usr/news/man: \
/usr/local/samba/man:/usr/internet/httpd/man:/usr/opt/hpapache2/man

# export MANPATH
```

If you are using the `csh` shell, you would use a command line like the following:

```
# setenv MANPATH $MANPATH:/usr/internet/pgsql/man:/usr/internet/openldap/man: \
/usr/news/man:/usr/local/samba/man:/usr/internet/httpd/man:/usr/opt/hpapache2/man
```

For details about defining reference page search paths, see `man(1)`.

2.1.4 Reading the Open Source Software Component Documentation

The product kit also provides documentation (in ASCII text and HTML) for software components included with Internet Express. This documentation is located in the `/usr/internet/docs` directory on the system where Internet Express is installed.

2.1.5 Reading the *Internet Services User's Guide*

The *Internet Services User's Guide* explains how to use Pine e-mail and the Pico editor, the TIN news reader, and the Lynx Web browser.

The *Internet Services User's Guide* is accessible from the Internet Express online Documentation Bookshelf. You can access the Bookshelf from links on the Administration utility home page (on port 8081), the default home page for

the public Web server, or directly from the Internet Express *Installation and Documentation* CD-ROM. (See Section 2.1 for instructions.)
